

NOTE FOR SPEKTRUM.SAT PORT: Because there is only one serial port on the Pro Mini, using a Spektrum Satellite implies you CANNOT use the PC based configuration tool. Further, you cannot use on-aircraft serial LCD as the baud rates are incompatible. You can configure by one of two methods:

- 1) Use an on-aircraft i2c LCD (such as Eagle Tree or LCD03) for setting gains, reading sensors, etc.
- 2) Available now: Comment out the Spektrum definition, upload, plug in PC, configure; uncomment the Spektrum definition, upload, plug in RX, and fly. Repeat as required to configure.
