TC622/TC624

Low Cost Single Trip Point Temperature Sensor

Features:

- Temperature Set Point Easily Programs with a Single External Resistor
- Operates with 2.7V Power Supply (TC624)
- TO-220 Package for Direct Mounting to Heatsink (TC622XAT) or Standard 8-Pin PDIP and SOIC

Applications:

- Power Supply Over-Temperature Detection
- Consumer Electronics
- Fire/Heat Detection
- UPSs, Amplifiers, Motors
- CPU Thermal Management in PCs

General Description:

The TC622 and TC624 are programmable solid-state temperature sensors designed to replace mechanical switches in sensing and control applications. Both devices integrate the temperature sensor with a voltage reference and all required detector circuitry. The desired temperature set point is set by the user with a single external resistor.

Ambient temperature is sensed and compared to the programmed set point. The OUT and $\overline{\text{OUT}}$ outputs are driven to their active state when the measured temperature exceeds the programmed set point.

The TC622 has a power supply voltage range of 4.5V to 18.0V while the TC624 operates over a power supply range of 2.7V to 4.5V. Both devices are usable over a temperature range of -40°C to +125°C (TC622VXX, TC624VXX). Both devices feature low supply current making them suitable for portable applications.

Eight-pin through-hole and surface mount packages are available. The TC622 is also offered in a 5-pin TO-220 package.

The TC622 and TC624 are single point temperature detectors ideal for use in a wide variety of applications.

Device Selection Table

Part Number	Voltage Operation	Package	Ambient Temperature
TC622COA	4.5V to 18V	8-Pin SOIC	0°C to +70°C
TC622CPA	4.5V to 18V	8-Pin PDIP	0°C to +70°C
TC622EAT	4.5V to 18V	5-Pin TO-220	-40°C to +85°C
TC622EOA	4.5V to 18V	8-Pin SOIC	-40°C to +85°C
TC622EPA	4.5V to 18V	8-Pin PDIP	-40°C to +85°C
TC622VAT	4.5V to 18V	5-Pin TO-220	-40°C to +125°C
TC622VOA	4.5V to 18V	8-Pin SOIC	-40°C to +125°C
TC622VPA	4.5V to 18V	8-Pin PDIP	-40°C to +125°C
TC624COA	2.7V to 4.5V	8-Pin SOIC	0°C to +70°C
TC624CPA	2.7V to 4.5V	8-Pin PDIP	0°C to +70°C
TC624EOA	2.7V to 4.5V	8-Pin SOIC	-40°C to +85°C
TC624EPA	2.7V to 4.5V	8-Pin PDIP	-40°C to +85°C
TC624VOA	2.7V to 4.5V	8-Pin SOIC	-40°C to +125°C
TC624VPA	2.7V to 4.5V	8-Pin PDIP	-40°C to +125°

2.0   PIN DESCRIPTION

The descriptions of the pins are listed in Table 2-1.

TABLE 2-1:   PIN FUNCTION TABLE

Pin No. (8-Pin SOIC) (8-Pin PDIP)	Symbol	Description
1	NC	No Internal Connection.
2	$\overline{\text{OUT}}$	Active low output.
3	OUT	Active high output.
4	GND	Ground Terminal.
5	T_{SET}	Temperature set point. Connect an external 1% resistor from T_{SET} to V_{CC} to set trip point.
6	NC	No Internal Connection.
7	V_{DD}	Power supply input.
8	NC	No Internal Connection.

Pin No. (5-Pin SOT-220)	Symbol	Description
1	$\overline{\text{OUT}}$	Active low output.
2	OUT	Active high output.
3	V_{DD}	Power supply input.
4	GND	Ground Terminal.
5	T_{SET}	Temperature set point. Connect an external 1% resistor from T_{SET} to V_{CC} to set trip point.

3.0   DETAILED DESCRIPTION

3.1   Trip Point Programming

When the temperature of the device exceeds the programmed temperature trip point, T_{SET}, the OUT and $\overline{OUT}$ outputs are driven into their active states. The desired trip point temperature is programmed with a single external resistor connected between the T_{SET} input and V_{CC}. The relationship between the resistor value and the trip point temperature is given by Equation 3-1.

EQUATION 3-1:

$$R_{TRIP} = 0.5997 \text{ x } T^{2.1312}$$

Where:

R_{TRIP} = Programming resistor value in Ohms
T = Desired trip temperature in degrees Kelvin.

For example, as shown in Figure 3-1, to program the device to trip at 50°C, the programming resistor is:

$$R_{TRIP} = 0.5997 \text{ x } ((50 + 273.15)^{2.1312}) = 133.65 \text{ k}\Omega$$
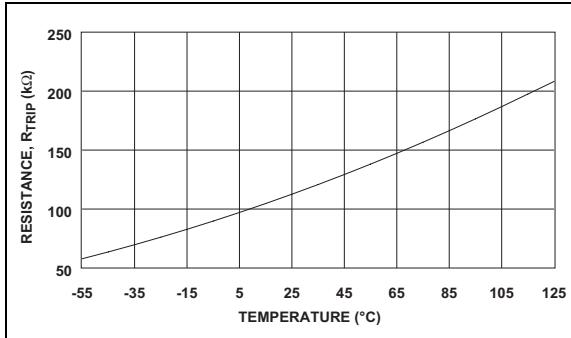

FIGURE 3-1: Programming Resistor Values vs. Temperature

3.2   Hysteresis

To prevent output "chattering" at the trip point temperature, the temperature detector in the TC622/TC624 has 2°C hysteresis (see Figure 3-2). The outputs are driven active when the temperature crosses the set point determined by the external resistor. As temperature declines below the set point, the hysteresis action will hold the outputs true until the temperature drops 2°C below the threshold.
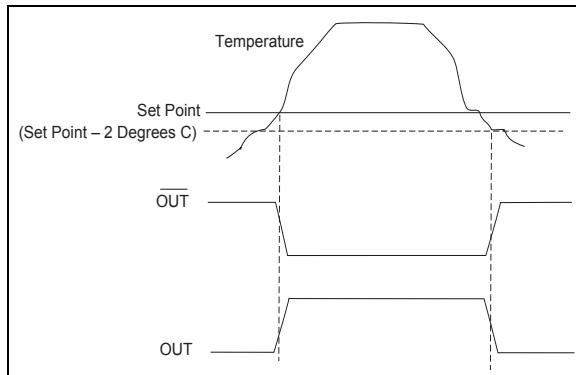

FIGURE 3-2: TC622/TC624 Hysteresis

TC622/TC624

4.0   TYPICAL APPLICATIONS

4.1   Over-Temperature Shutdown

The TC622 can be used to create a simple over-temperature shutdown circuit. In this circuit, temperature is sensed within the system enclosure (internal system ambient) or at the heatsink itself. When measured temperature exceeds a preset limit, a fault is indicated and the system shuts down.

Figure 4-1 illustrates an over-temperature shutdown circuit using the TC622 sensor in a single TO-220 package, allowing direct attachment to the heatsink surface. As shown, the TC622 outputs are driven active when the heatsink temperature equals the trip point temperature set by R_{TRIP}. When this happens, the crowbar circuit is activated, causing the supply output to fold back to zero. The TC622 outputs remain active until the heatsink temperature falls a minimum of 2°C (built-in hysteresis) below the trip point temperature, at which time the device again allows normal supply operation.

4.2   Cooling and Heating Applications

The TC622/TC624 can be used to control a DC fan as shown in Figure 4-2. The fan turns on when the sensed temperature rises above T_{SET} and remains on until the temperature falls below T_{SET} - 2°C.

Figure 4-3 shows the TC622 acting as a heater thermostat. Circuit operation is identical to that of the cooling fan application.

NOTES:

SALES AND SUPPORT

Data Sheets
Products supported by a preliminary Data Sheet may have an errata sheet describing minor operational differences and recommended workarounds. To determine if an errata sheet exists for a particular device, please contact one of the following:

1. Your local Microchip sales office
2. The Microchip Corporate Literature Center U.S. FAX: (480) 792-7277
3. The Microchip Worldwide Site (www.microchip.com)

Please specify which device, revision of silicon and Data Sheet (include Literature #) you are using.

New Customer Notification System
Register on our web site (www.microchip.com/cn) to receive the most current information on our products.

NOTES:

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.

- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.

- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.

- Microchip is willing to work with the customer who is concerned about the integrity of their code.

- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.
